

Guardian Mail

Keep Malicious Messages Out of Your Mail Server
and Your User's Inboxes

OVERVIEW

Mail system operators see as much as 95% of the mail hitting their mail servers as spam and fraud, thus need the first line of defense for their server and user's Inboxes. Abusix's Guardian Mail is recognized as the most effective commercial blacklist for blocking spam, fraud, and suspicious senders, in the market today.

Over 20 Billion Threat Indicators Processed Per Day

DESCRIPTION

Abusix provides Guardian Mail to mail operators, security providers, and enterprises to allow them to block mail-borne threats and protect their customers. Using our proprietary sensor networks, Abusix has an unparalleled view of threats. Our detection and blocking of compromised IP addresses and domains found recurring in spam at the edge, allows upstream message heuristics and antivirus engines to run more efficiently.

GUARDIAN MAIL BLOCKS

Spamming IP addresses
and domains

Malware IP addresses,
domain and URL Lists

Public IP addresses
(dynamic IP addresses
assigned to residential
subscribers)

Ransomware IP
addresses, domain and
URL Lists

Real-time spam trap hits

TOR exit points

URL blacklists

Zero reputation domains

KEY BENEFITS

1. Abusix Guardian Mail blocks real-time emerging threat identification in less than 10 seconds, where our competitors' block new emerging threats by 10 minutes or more.

2. Guardian Mail provides simple fast drop-in integration into your existing mail servers and antispam filters.

3. Guardian Mail costs on average, 25% less than similar competitors, and provides rapid ROI through both direct cost savings and through a dramatic reduction in malicious traffic.

Spam Catch Rate: 99.02%
Malware Catch Rate: 99%

GUARDIAN MAIL: DATA IS POWER

Block sophisticated mail-borne cyber-attacks:

Guardian Mail blocks real-time emerging threats in less than 10 seconds vs minutes.

- Our broad sensor network allows us to detect compromised IP addresses and domains sending spam faster
- Our state of the art architecture process and identifies new threats in 1/10th of a second validates and issues a final decision in less than 10 seconds across DNS.
- Better source data provides a 3x increase in blocking of known malware at the edge than other blocklists.

Guardian Mail provides simple fast integration into your existing mail servers and antispam filters.

- Often all it takes is 3 lines of code to have your MTA query our DNS.
- If you have a more advanced setup and wish to use our RSYNC service, AMI is completely compatible with any current existing RSYNC process, RSYNC and is configured in minutes.

Guardian Mail costs on average, 25% less than similar competitors, and provides rapid ROI

- Less expensive to purchase
- Transparent blacklisting, delisting process, and support resolution helps relieve your postmaster of work
- One stop information source allows network administrators to understand the reason for a block, thus giving them a clear signal to help a user on their network or shut down an open relay, bot or bad actor.
- Clear delisting processes help legitimate senders understand their problems and thus secure their outbound servers faster.

SPECIFICATIONS

Guardian Mail supports drop-in installation and integration with your existing infrastructure. It can be deployed in your environment in the following ways:

DNSBL Service

Guardian Mail's DNSBL Service is built as a seamless state of the art distributed, fiber connected, global cloud-based service running on hardened architecture.

RSYNC Service

Guardian Mail Zones are available by RSYNC if desired. RSYNC rebuild and transport induces an additional minute in dwell time

REQUIREMENTS

Often all Guardian Mail requires is simply 3 lines of code for the MTA to query the Mail Intelligence IP list, and if desired 3 lines of code for the filter for the domain list.
